

This questionnaire focuses on any recent injuries you may have had in the past 12 months which were either medically attended (you consulted or were treated by a trained medical professional) or restricted your normal activity for at least a half day.

We are only interested in unintentional injuries so please restrict your responses to injuries in which you were accidentally injured. Please describe only new episodes of injuries (exclude repeated or cumulative episodes of older injuries like repetitive strain injuries or injuries repeating the same movement like carpal tunnel syndrome, tendonitis, tennis elbow).

- Section A asks generally about any injuries you may have had.
- Section B asks about specific injuries you may have had (falls, transportation, burns/scalds, etc).
- Section C consists of tables with further detailed questions regarding these specific injuries.
- This questionnaire should take 15-20 minutes to complete. It has many skips and so is shorter than it appears. Please note it is double-sided. Thank you very much for your time.

1. In the past 12 months, did you have any injury where any part of your body was hurt (for example, broken bone, sprain, burn, wound, bruise, animal bite, concussion) for which you talked to, saw, consulted, or received treatment from a medical doctor, nurse, or other trained medical professional ('medically-attended') or which resulted in your normal activities being restricted for at least a ½ day?

___ yes ___ no
